Part III DETAILED ACTION

Specification

1. Claims 1-22 are presented for examination.
2. Applicant is reminded of the duty to fully disclose information under 37 CFR 1.56.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1-15 and 20-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Miller et al. (USPN: 6,397,351); hereinafter Miller;

As per claims 1, 6 and 11, Miller discloses the data storage system, comprising a host computer system (e.g. see figure 1); a

Serial Number: 09/692,957

Art Unit: 2186

first set of storage volumes and a second set of storage volumes for backing-up data from the first set of storage volumes is taught by Miller as being illustrated at column 5, line 31 bridging column 6, lines 9, especially through the concept of internal/ external backup wherein Miller clearly discloses the external backups may reside on the storage 112, at a remote site, or on another location that is physically separate from the storage 112 (e.g. see figure 1); a controller for controlling the transfer of data from the host system to the first and second set of storage volumes, wherein at least the first set of storage volumes further comprises data recording media including a plurality of extended format sectors, the extended format sectors comprising a user data sector field for storing user data and a backup indicator field for indicating the status of the user data sector field is taught as controller 108 which uses metadata 116 including the backup list 120, pointer set list 122, accumulator indicator 123, and update map 121 wherein the update map 121 may comprise a bit map, where each bit represents one subpart of the backup dataset, and the status of that bit indicates whether the change accumulator 130 contains any updates affecting that subpart. The change accumulator indicator 123 tells whether the backup restoration process is currently applying any change

accumulator data to restored backup data; for example, the indicator 123 may comprise a flag such as a storage bit (e.g. see column 7, lines 49 et seq.); noting that the further limitation of a magnetic storage medium having servo information ...sectors; a motor and a head assembly having at least one read head for reading and writing data on the a plurality of extended format sectors is embedded in the system of Miller and being taught to the extent that it is being claimed since different machine-readable data storage media can be utilized such as magnetic disk, RAID arrays, etc.. (e.g. see column 5, lines 14 et seq.);

As per claims 2, 7 and 12, wherein the backup indicator field indicates whether the user data in the user data sector field has been written to backup storage subsequent to a previous backup operation is taught by Miller as the update map 121 may comprise a bit map wherein each bit represents one subpart of the backup dataset, and the status of that bit indicates whether the change accumulator 130 contains any updates affecting that subpart (e.g. see column 7, lines 49 et seq.);

As per claim 3, 8 and 13 wherein the backup indicator comprises a single bit is taught by Miller as the indicator 123 may comprise a flag such as a storage bit (e.g. see column 7, lines 56-57);

Serial Number: 09/692,957

Art Unit: 2186

As per claim 4, 9 and 14; Miller discloses the log record is sorted according to the datasets that each log record corresponds to then by attributes such as data, time, .. within each dataset (e.g. see column 8, lines 34 et seq.);

As per claims 5, 10 and 15; Miller discloses wherein the backup indicator indicates whether the user data sector field has been written to (e.g. see column 7, lines 49 et seq.);

As per claims 20-22, they encompass the same scope of invention as to that of claims 1-5, 6-10 and 11-15 except they are drafted as method format rather than apparatus format, the claims are therefore rejected for the same reasons as being set forth above.

Allowable subject matter

5. Claim 16 is objected to as being dependent upon a rejected based claims, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 17-19 are also allowable since they are depend upon the indicated allowable claim 16.
